

Justin Williams

justinwilliams@berkeley.edu | slomojustin.com | LinkedIn | Substack

Summary

- EECS graduate from UC Berkeley with hands-on experience building and orchestrating AI agent systems. Fluent in LLM-augmented development workflows using Claude and OpenAI APIs, agents, and Python/TypeScript full-stack environments.

Education

University of California, Berkeley | *Electrical Engineering and Computer Science*

August 2025

- Relevant Coursework: Communication Networks, Computer Security, Data Structures, Machine Structures, Artificial Intelligence, Digital Design & Integrated Circuits Lab, Internet Architecture, Circuits, Physics for Engineers

Experience

Qidds | *AI SWE Intern* | Fremont, CA

May 2026 - Present

- Designed and implemented the Validation and Maintenance Agents in a four-agent LangGraph pipeline for a K-12 educational program discovery platform, building deterministic pipelines with field-shape translation, duplicate detection, and automated deadline rollover and drift detection.
- Owned the AWS deployment pipeline for all four agents end-to-end: ECS Fargate task definitions, ECR image repos, IAM/OIDC deploy roles, SSM Parameter Store secrets, CloudWatch logging, and RDS/security-group access — taking services from local Docker to running production containers.
- Diagnosed and fixed layered production failures spanning network, database, and application boundaries, then closing each bug class at its root instead of patching the instance.
- Built an admin-gated publishing workflow routing validated records through multi-step approval to a Spring Boot REST API, and shipped an AI-generated cover-image feature (LLM image API + admin review UI with prompt preview and before/after comparison).

PeerSweep | *Co-Creator* | Antioch, CA

March 2026 - Present

- Selected for TinyFish's incubator program (Round 2), co-building with a veteran banking executive to engineer his vision for democratizing C-suite decision intelligence using AI agents and live regulatory data.
- Orchestrated up to 25 parallel AI agents to scrape live deposit rates, news, and social signals across peer banks, compressing multi-day research into seconds, and built a multi-tab dashboard turning that data into actionable decision intelligence.

CSM Mentor | *Instructor for Electrical Engineering and Circuits 1* | Berkeley, CA

Aug 2023 - May 2025

- Taught and mentored each semester a group of students, simplifying complex circuit analysis concepts through explanations and reinforcing understanding by adapting teaching methods to each student's learning needs.

Technical Projects

Secure File-Sharing System | *Go, Cryptography, Systems Design* | Berkeley, CA

Feb 2025 - Apr 2025

- Designed and implemented an encrypted multi-user file-sharing service, clearly communicating system behavior, threat models, and design decisions to partners—mirroring customer-facing architectural explanations.
- Translated complex cryptographic workflows into intuitive explanations for peers, mirroring the communication style required when guiding customers through secure product features in practical, real-world scenarios.

Phishing Detection Tool Using Machine Learning | *Python, Flask, Google Cloud* | Berkeley, CA

Dec 2025

- Built a cloud-integrated ML tool that analyzes Gmail messages using heuristic rules and sentiment analysis (Google NLP API); delivered findings through a clean UI and easy-to-understand scoring system for improved clarity.
- Designed the UI and scoring explanations to make ML-driven results easy for non-technical users to interpret, improving usability and clarity throughout the full system interface and workflow.

Traceroute & Network Path Discovery | *Python, Raw Sockets* | Berkeley, CA

Jan 2025 - Feb 2025

- Built a custom traceroute utility by crafting/parsing IP/ICMP packets and manipulating TTL values, adding robust error handling for dropped, duplicated, and malformed packets to map multi-hop network paths effectively and reliably.
- Created user-friendly documentation describing traceroute output and common failure modes, closely mirroring the clear, structured troubleshooting guides used in customer support and pre-sales engineering workflows.

Skills

- Python, Java, Go, C++, Git, Cryptography, Networking, Spring Boot, Secure Systems Design, Multi-Agent Systems, LangGraph, Prompt Engineering, Natural Language Processing, React, Flask, Next.js, Model Context Protocol, PostgreSQL, AWS (ECS Fargate, ECR, IAM, SSM Parameter Store, CloudWatch, RDS), FastAPI, Docker
